

1. Which are the top three variables in your model which contribute most towards the probability of a lead getting converted?

Ans: 1. Total Visits, 2. Total Time spent on website, 3. Lead Source - google

2. What are the top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion?

Ans: Lead Source – Google, lead source – Organic search, lead source - Direct traffic.

3. X Education has a period of 2 months every year during which they hire some interns. The sales team, in particular, has around 10 interns allotted to them. So during this phase, they wish to make the lead conversion more aggressive. So they want almost all of the potential leads (i.e. the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.

Ans: Have a talk with customer if

1. They spend large time on website.
 2. They repeatedly visit the website.
 3. If they are working professionals
4. Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e. they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.

Ans: automated emails, active chat bots that pop up if a customer spends more time than a threshold on the website. These methods can be employed if customer is a real hot lead.
